

## IN THE CLAIMS

The following is a complete listing of the claims, and replaces all earlier versions and listings.

1. (Currently Amended) A method of transcoding a digital signal encoded according to a first encoding mode into a digital signal encoded according to a second encoding mode, the second encoding mode comprising a bit rate-distortion allocation of the encoded digital signal, ~~characterized in that it comprises~~ comprising the steps of:

obtaining  $[(S2)]$  at least a first parameter of encoding the signal according to the first mode;  $[[,]]$

obtaining  $[(S7)]$  at least a second parameter from an at least partial encoding ~~(S4, S5, S6)~~ of the signal according to the second mode; and  $[[,]]$

selecting  $[(S8)]$  a bit rate-distortion allocation mode for the encoding of the signal according to the second mode, as a function of the first and second parameters.

2. (Currently Amended) A transcoding method according to claim 1, ~~characterized in that~~ in which the first parameter  $[(S2)]$  is the bit rate of the signal encoded according to the first encoding mode.

3. (Currently Amended) A transcoding method according to claim 1 or 2, ~~characterized in that~~ in which the second parameter  $[(S7)]$  is the maximum bit rate of the signal encoded according to the second encoding mode.

4. (Currently Amended) A method of transcoding according to claim 3, characterized in that in which the selection ~~[[S8]]~~ of a bit rate-distortion allocation mode for the encoding of the signal according to the second mode comprises the steps of:

comparing ~~(S80, S800)~~ a fraction of the bit rate of the signal encoded according to the first encoding mode with the maximum bit rate of the signal encoded according to the second encoding mode; and ~~[[,]]~~

selecting ~~(S81, S801)~~ the maximum bit rate of the signal encoded according to the second encoding mode, as target bit rate of the allocation mode, if the maximum bit rate of the signal encoded according to the second encoding mode is less than the fraction of the bit rate of signal encoded according to the first encoding mode.

5. (Currently Amended) A method of transcoding according to claim 3, characterized in that in which the selection of a bit rate-distortion allocation mode for the encoding of the signal according to the second mode comprises the steps of:

comparing ~~(S80, S800)~~ a fraction of the bit rate of the signal encoded according to the first encoding mode with the maximum bit rate of the signal encoded according to the second encoding mode; and ~~[[,]]~~

selecting ~~(S83, S803)~~ the fraction of the bit rate of the signal encoded according to the first encoding mode, as target bit rate of the allocation mode, if the maximum bit rate of the signal encoded according to the second encoding mode is greater than the fraction of the bit rate of signal encoded according to the first encoding mode and if a quantization parameter of the first encoding mode is less than a predetermined threshold.

6. (Currently Amended) A method of transcoding according to claim 3, characterized in that in which the selection of a bit rate-distortion allocation mode for the encoding of the signal according to the second mode comprises the steps of:

comparing (S80; S800) a fraction of the bit rate of the signal encoded according to the first encoding mode with the maximum bit rate of the signal encoded according to the second encoding mode; and [[,]]

selecting (S84; S804) a predetermined distortion as target distortion of the allocation mode, if the maximum bit rate of the signal encoded according to the second encoding mode is greater than the fraction of the bit rate of signal encoded according to the first encoding mode and if a quantization parameter of the first encoding mode is greater than a predetermined threshold.

7. (Currently Amended) A method of transcoding according to claims 1 or 2, characterized in that in which the first encoding mode is an encoding according to the JPEG standard.

8. (Currently Amended) A method of transcoding according to claims 1 or 2, characterized in that in which the second encoding mode is an encoding according to the JPEG2000 standard.

9. (Currently Amended) A device for transcoding a digital signal encoded according to a first encoding mode into a digital signal encoded according to a second

encoding mode, the second encoding mode comprising a bit rate-distortion allocation of the encoded digital signal, ~~characterized in that it comprises~~ comprising:

means  $[[ (101) ]]$  for obtaining at least a first parameter of encoding the signal according to the first mode;  $[[ , ]]$

means  $[[ (102) ]]$  for obtaining at least a second parameter from an at least partial encoding of the signal according to the second mode; and  $[[ , ]]$

means  $[[ (103) ]]$  for selecting a bit rate-distortion allocation mode for the encoding of the signal according to the second mode, as a function of the first and second parameters.

10. (Currently Amended) A transcoding device according to claim 9, ~~characterized in that it is~~ adapted to implement a first parameter which is the bit rate of the signal encoded according to the first encoding mode.

11. (Currently Amended) A transcoding device according to claim 9 or 10, ~~characterized in that it is~~ adapted to implement a second parameter which is the maximum bit rate of the signal encoded according to the second encoding mode.

12. (Currently Amended) A transcoding device according to claim 11, wherein said ~~characterized in that the~~ means  $[[ (103) ]]$  for selecting a bit rate-distortion allocation mode for the encoding of the signal according to the second mode comprise:

means for comparing a fraction of the bit rate of the signal encoded according to the first encoding mode with the maximum bit rate of the signal encoded according to the second encoding mode; and [[.]]

means for selecting the maximum bit rate of the signal encoded according to the second encoding mode, as target bit rate of the allocation mode, if the maximum bit rate of the signal encoded according to the second encoding mode is less than the fraction of the bit rate of signal encoded according to the first encoding mode.

13. (Currently Amended) A transcoding device according to claim 11, ~~characterized in that the~~ wherein said means [[[103)]]] for selecting a bit rate-distortion allocation mode for the encoding of the signal according to the second mode comprise:

means for comparing a fraction of the bit rate of the signal encoded according to the first encoding mode with the maximum bit rate of the signal encoded according to the second encoding mode; and [[.]]

means for selecting the fraction of the bit rate of the signal encoded according to the first encoding mode, as target bit rate of the allocation mode, if the maximum bit rate of the signal encoded according to the second encoding mode is greater than the fraction of the bit rate of signal encoded according to the first encoding mode and if a quantization parameter of the first encoding mode is less than a predetermined threshold.

14. (Currently Amended) A transcoding device according to claim 11, characterized in that the wherein said means ~~[[ (103) ]]~~ for selecting a bit rate-distortion allocation mode for the encoding of the signal according to the second mode comprise:

means for comparing a fraction of the bit rate of the signal encoded according to the first encoding mode with the maximum bit rate of the signal encoded according to the second encoding mode; and ~~[[.]]~~

means for selecting a predetermined distortion as target distortion of the allocation mode, if the maximum bit rate of the signal encoded according to the second encoding mode is greater than the fraction of the bit rate of signal encoded according to the first encoding mode and if a quantization parameter of the first encoding mode is greater than a predetermined threshold.

15. (Currently Amended) A transcoding device according to claims 9 or 10, ~~characterized in that it is~~ adapted to implement a first encoding mode which is an encoding according to the JPEG standard.

16. (Currently Amended) A transcoding device according to claims 9 or 10, ~~characterized in that it is~~ adapted to implement a second encoding mode which is an encoding according to the JPEG2000 standard.

17. (Currently Amended) A transcoding device according to claims 9 or 10, ~~characterized in that the~~ wherein said means for obtaining and selecting are incorporated in:

[[ - ]] a microprocessor; (+00);

[[ - ]] a read only memory [[ (102) ]], comprising a program for processing the data; [[,]] and

[[ - ]] a random access memory [[ (103) ]] comprising registers adapted to record variables modified during the execution of said program.

18. (Currently Amended) An apparatus (+0) for processing a digital image, characterized in that it comprises means adapted to implement the method according to claims 1 or 2.

19. (Currently Amended) An apparatus (10) for processing a digital image, characterized in that it comprises comprising the device according to claims 9 or 10.

20. (Currently Amended) Storage A computer-readable storage medium storing a program for implementing the method according to claims 1 or 2.

21. (Currently Amended) Storage A computer-readable storage medium according to claim 20 storing a program for implementing a method of transcoding a digital signal encoded according to a first encoding mode into a digital signal encoded according to a second encoding mode, the second encoding mode comprising a bit rate-distortion allocation of the encoded digital signal, the method comprising the steps of:  
obtaining at least a first parameter of encoding the signal according to the first mode;

obtaining at least a second parameter from an at least partial encoding of the signal according to the second mode; and

selecting a bit rate-distortion allocation mode for the encoding of the signal according to the second mode, as a function of the first and second parameters,

characterized in that wherein said computer-readable storage medium is detachably mountable on a device according to claims 9 or 10.

22. (Currently Amended) Storage A computer-readable storage medium according to claim 20 or 21, characterized in that said storage medium is comprising a floppy disk or a CD-ROM.

23. (Currently Amended) Computer program stored on a computer-readable storage medium and comprising computer executable instructions for transcoding a digital signal according to claims 1 or 2.
